

Software & Technologies Used

1. Java Development Kit (JDK)

Used for backend development with Spring Boot.

Download:

<https://www.oracle.com/java/technologies/downloads/>

2. Spring Boot

Framework used to build REST APIs and backend logic.

Download / Start Project:

<https://start.spring.io/>

Documentation:

<https://spring.io/projects/spring-boot>

3. Apache Maven

Used for dependency management and project build automation.

Download:

<https://maven.apache.org/download.cgi>

4. Node.js

Required to run React.js frontend and manage JavaScript packages.

Download:

<https://nodejs.org/>

5. React.js

Frontend library used to build the user interface of the event booking system.

Download / Documentation:

<https://react.dev/>

Create React App / Vite:

<https://vitejs.dev/>

6. Visual Studio Code

Code editor used for writing frontend and backend code.

Download:

<https://code.visualstudio.com/>

7. MySQL Database

Used to store user data, events, tickets, and QR validation logs.

Download:

<https://dev.mysql.com/downloads/mysql/>

8. MySQL Workbench

Tool used to manage and visualize the database.

Download:

<https://dev.mysql.com/downloads/workbench/>

9. Postman

Used to test REST APIs for backend endpoints.

Download:

<https://www.postman.com/downloads/>

10. Git

Version control system used to manage project code.

Download:

<https://git-scm.com/downloads>

11. GitHub

Used to host and manage project source code online.

Website:

<https://github.com/>

12. QR Code Library

Used to generate and validate QR codes for tickets.

Example Libraries:

Java QR Generator:

<https://github.com/zxing/zxing>

React QR Code:

<https://www.npmjs.com/package/qrcode.react>
